

Marblehead → Provincetown — Race Weather at a Glance

Friday, 7 PM start · finish around 3 AM Saturday · about 40 miles across the bay

Your route — Marblehead to Provincetown (red X = keep-out zone)

The short version

A tricky, light start just after sunset, then a steady breeze from the south fills in and you reach across the bay in 8-12 kt with almost flat water. It stays mild (about 65°F) but damp overnight, and fog is possible. Nothing heavy — the challenge is the light, shifty start and timing the tide at the Provincetown end.

What to do

- Start smart — the wind is light and shifty at 7 PM. Get a clean lane off the line, then head offshore where there's more breeze.
- Reach across in a steady southerly (8-12 kt). Stay out in the pressure, not tucked near the shore.
- Expect puffs to shift — a bit stronger and from a slightly different angle. Don't over-commit to one direction.
- Avoid the LNG buoys (red X on the map) — a no-entry zone. The straight-line course passes safely south of it.
- Round Race Point before about 2:45 AM so the tide carries you into Provincetown; later, it pushes against you.
- Dress for damp — mild (~65°F) but wet, with possible fog. Bring layers, and check the forecast again in the morning.

Key facts

Wind: from the south, 8-12 kt (light ~5 kt at the start), gusts to ~15. · Water: nearly flat, under 1 ft. · Air: ~65°F all night, damp, fog possible. · Tide: favorable into Provincetown before ~2:45 AM.
